NZ  
supporting game cards used to play a game. A console extends upwardly between the playing surfaces and supports first and second side-by-side electronic video displays on each side facing the player surfaces. Independent game controllers are provided for each of the displays for presenting individual games at each of the displays. The game station includes wager accepting devices for playing the games presented on the video displays. The game station includes player conveniences such as seat, coat hook, and transparent game card cover extending over the playing surfaces. The game station as configured permits players located at each side of the station to engage in the play of at least three independent games concurrently.

Sub 37  
N3  
35. A game station configured to present multiple independent games simultaneously to each of two players using the game station comprising:  
a base unit having an upwardly extending base portion;  
a first end and a second end;  
a first and a second horizontal playing surface extending outwardly generally opposite one another from said base portion between said first and second ends, said first and second playing surfaces sufficiently large to accommodate at least one game card, permitting each of said players to play at least one game using said game card at said game station;
